Abstract

This short ebook presents one of the methods being used by the CIA to attack and murder thousands of victims in nursing homes. The deaths are blamed on Coronavirus. These same methods are used to torture Targeted Individuals. I have compared the lung attacks to waterboarding, without the water, however the effect is the same – suffocation.

1. Introduction

Satellite tracking and cell towers are both involved in the technology to

attack and murder thousands of people in nursing homes.

Figure 1. Targeted Individuals refer to these attacks as the “machine gun,” due to the rapid, high intensity microwave pulse. The attacks generally are directed thru a cell tower antenna using digital beamforming. Once the initial “raw spot” is created inside the throat, the coughing reflex can be turned on instantly, just like a light switch.

Fig. 1
Five attack points used to create coughing.

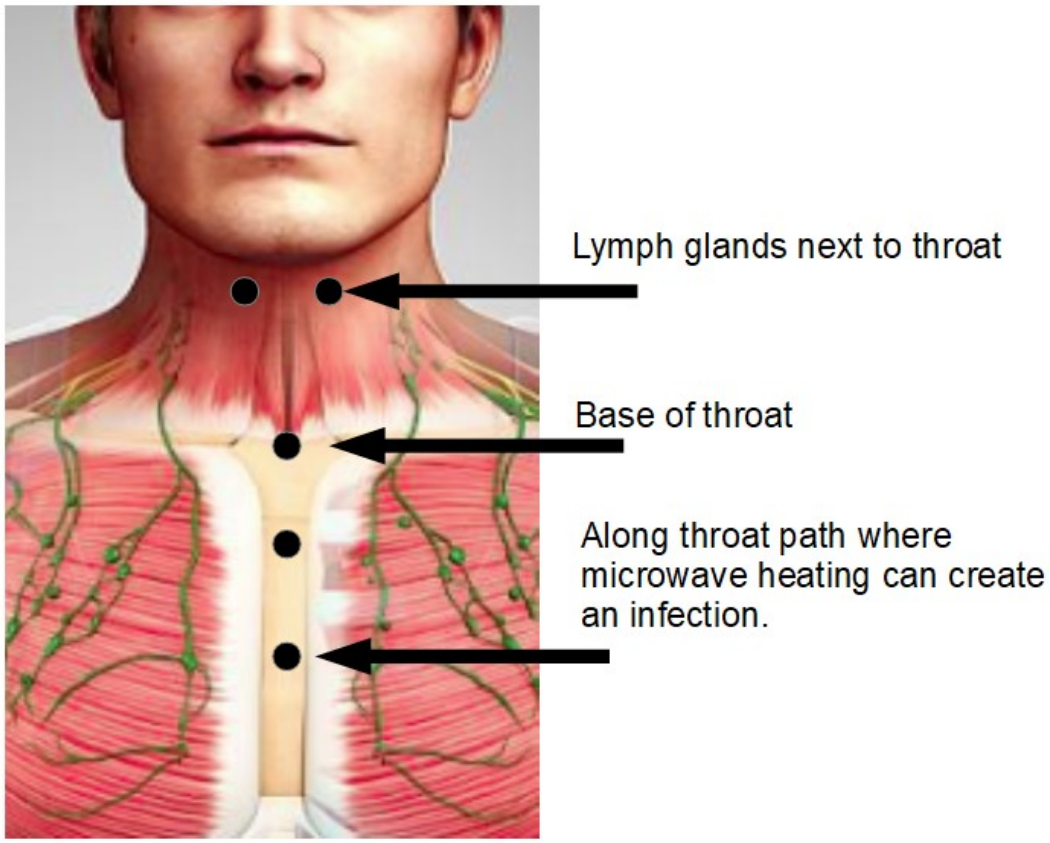

Figure 2. Five attack points to force coughing. Targeted Individuals refer to it as the “machine gun”, because it consists of a rapid microwave pulses.

By Inside GNSS
The navigation message has always been considered an inherent and essential feature of a global satellite navigation system. Its primary objective is to provide receivers with information on the errors of satellite clocks and parameters to compute the positions of satellites, as well as other parameters that help generate more accurate measurements.

How to Get Centimeter Accuracy on iPad With GPS / GNSS
Getting centimeter accuracy on IPad is possible with GNSS! Here's How
More and more people want to use IPads and IPhones for high-accuracy GIS/GNSS data collection. At first, detractors said those devices wouldn't survive in the field. They've been proven wrong. Put them in an inexpensive Otterbox or LifeProof case and they become robust GIS/GNSS data collection devices that are giving traditional, expensive rugged Windows-based tablets a serious challenge.
The practice of connecting, via Bluetooth, an RTK GNSS receiver to a Windows tablet has been around for years. It's not difficult. The Bluetooth manager on the Windows tablet assigns a COM (communications) port (eg. COM9) to the Bluetooth RTK GNSS receiver. Then, the user just needs to setup the data collection software (eg. ArcPad et al.) to look at that COM port to stream the GNSS data into the app.

The accuracy is less than 1 centimeter (½ inch).

This technology is not new – it is 30 years old. Anyone can purchase it for their iPad. See these ads from GNSS magazine.

How to suffocate a victim:

Figure 3. Rohde & Swartz SZU100A. This is a murder weapon. It

operates at 58 to 63 GHz. When the 60 GHz frequency is pointed at the lungs, it blocks the uptake of oxygen in the lungs, causing the victim to suffocate to death. The death is blamed on the coronavirus.

This is one example of the favorite murder weapons of the CIA right now. It is a called a Signal Generator Upconverter - Rohde & Schwarz Model # SZU100A. Tens of thousands of people in U.S. nursing homes, are being murdered with this technology. It is about the size of a shoebox, and mounted in a cell tower. Rohde & Schwarz openly advertise that their equipment is used with 5G cell towers. The company is headquartered in Munich, Germany and has USA headquarters in Columbia, MD. Only a handful of companies in the world can make signal generators that reach these frequencies, so they are quite expensive - about $50,000 for the basic equipment. It requires an input signal around 30 GHz, which is another expensive signal generator.

Note that it is very unusual to make a signal generator with such a limited frequency range. It is designed for one purpose - for use as a weapon.
www.Rohde-Schwarz.com

The 60 GHz signal can be directed from a cell tower using "digital beam forming," and it blocks the uptake of oxygen in the lungs and the patient suffocates to death. The death is blamed on Coronavirus. A NYC medical doctor discovered this, and posted a video on YouTube: New York Medical Doctor, Cameron Kyle-Sidell, says many hospital patients are suffocating (hypoxia) - and it is not Coronavirus. It is evident that 5G microwaves (60 GHz) are being used to attack the lungs and block the uptake of oxygen. The patient suffocates to death and it is blamed on COVID. https://youtu.be/k9GYTc53r2o

Oxygen Absorption signals can be measured using a Spectrum Analyzer:
https://www.sciencedirect.com/science/article/abs/pii/S0022407311001099

I have personally been attacked with these 60GHz weapons. You can feel the vibrations on your chest and back, and it causes great difficulty breathing, gasping for oxygen. It is the equivalent of

waterboarding torture, except with air.

Real-time beamforming verification in 5G NR FR1
During development of MU-MIMO antenna arrays, the beamforming algorithms undergo steady revision. Whether used in regression testing or verification of newly introduced features, fast beamforming verification helps to speed up R&D for beamforming antennas and improve performance of your product.

Figure 7. Digital Beamforming technology is used to precisely direct the 60 GHz signal at the lungs of the victim. The Chinese company Huwei has leaned how to use digital beamforming. This is the real reason that the CIA and the Deep State are opposed to Huwei.

2. Conclusions

Presented here are some of the technologies that are being used by the CIA to murder thousands of innocent civilians. These technologies are also being used to torture Targeted Individuals.

This is a living document. The author reserves the right to make corrections and changes.
